Tanzania in Figures booklet is the revised version from the previous Tanzania in Figures booklets. This booklet is an extraction of information from various statistical publications compiled by the National Bureau of Statistics (NBS), Sector Ministries, Government Departments and Agencies (MDAs). These statistics give an indication of current social and economic trends in the country. Some of these latest figures are provisional and may be revised. Reference should be made to more detailed published sources and statistical data available at the NBS.

This 2010 edition of the booklet is based on information collected and published by NBS and MDAs as at the end of December 2010.

In addition, we have replaced Business Survey 2007 general finding data with data from 2010 Tanzania Demographic and Health Survey report and 2007/2008 Agriculture Sample Census preliminary results.

The feedback we receive from data users of this booklet are vital in ensuring that, we continue to provide appropriate data that meets their expectations. We rely on you to ensure that we continue to provide you with data that not only fulfils your needs, but is also presented in a concise usable manner.

## Millennium Development Goal Indicators, Tanzania 2010

Goal	Indicator	Value	
sustainability	Proportion of population with sustainable access to an improved water source <sup>12</sup>	Urban: 81.4 Rural: 46.7	Total: 54.5
	Proportion of population with access to improved sanitation <sup>13</sup>	Urban: 29.3 Rural: 8.7	Total: 13.3

<sup>1</sup>Excludes children with parental status missing. TDHS data are based on reported attendance, not enrolment.

<sup>2</sup>Refer to respondents who attended secondary school or higher and who can read a whole sentence.

<sup>3</sup>For five-year period before the survey.

<sup>4</sup>For 10-year period before the survey.

<sup>5</sup>Among births in the past five years.

<sup>6</sup>High-risk sex refers to sexual intercourse with more than one partner.

<sup>7</sup>A person is considered to have comprehensive knowledge about AIDS when they say that (1) use of condom for every sex intercourse and having just one uninfected, faithful partner can reduce the chance of getting the AIDS virus, (2) a healthy-looking person can have the AIDS virus, and (3) they reject the two most common local misconceptions. The most common misconceptions in Tanzania are that AIDS can be transmitted through mosquito bites and that a person can become infected with AIDS virus by eating from the same plate as someone who is infected.

<sup>8</sup>The proportion of the population that own an insecticide-treated net (ITN)

<sup>9</sup>Prevention of malaria is measured as the percentage of children age 0-59 months that slept under an insecticide-treated bednet the night before the interview.

<sup>10</sup>Treatment of malaria is measured as the percentage of children age 0-59 months that was ill with a fever in the two weeks preceding the interview and that receive an antimalarial drug. The treatment is considered prompt if the child received the antimalarial drug on the same day as the onset of fever or the following day.

<sup>11</sup>Charcoal, firewood, straw, dung or crop waste.

<sup>12</sup>Proportion whose main source of drinking water is a household connection (piped), public standpipe, borehole, protected dug well or rainwater collection.

<sup>13</sup>Improved sanitation technologies are the following: flush toilet, pour flush toilet, traditional pit latrine, or ventilated, improved pit latrine.
